

Azure Data Factory Learning Roadmap

PHASE 1 — Foundations

- Understand ADF core concepts
- Integration Runtime types
- Linked Services, Datasets, Pipelines, Activities, Triggers

PHASE 2 — Data Movement & Transformation

- Copy Activity in depth
- Mapping Data Flows
- Transformations: joins, unions, aggregations

PHASE 3 — Orchestration & Automation

- Control flow: ForEach, If, Switch, Until
- Web, Lookup, Stored Procedure activities
- Scheduled, Event, Tumbling triggers

PHASE 4 — Integration Runtime & Connectivity

- SHIR, Azure IR, Managed VNET IR

PHASE 5 — CI/CD & DevOps

- Git integration
- ARM template-based deployments

PHASE 6 — Real-World Patterns

- Incremental loading
- SCD handling
- Metadata-driven pipelines

PHASE 7 — Monitoring & Optimization

- Monitoring, logging, retry policies

PHASE 8 — Security & Governance

- Key Vault, private links, RBAC
